INTENSITY

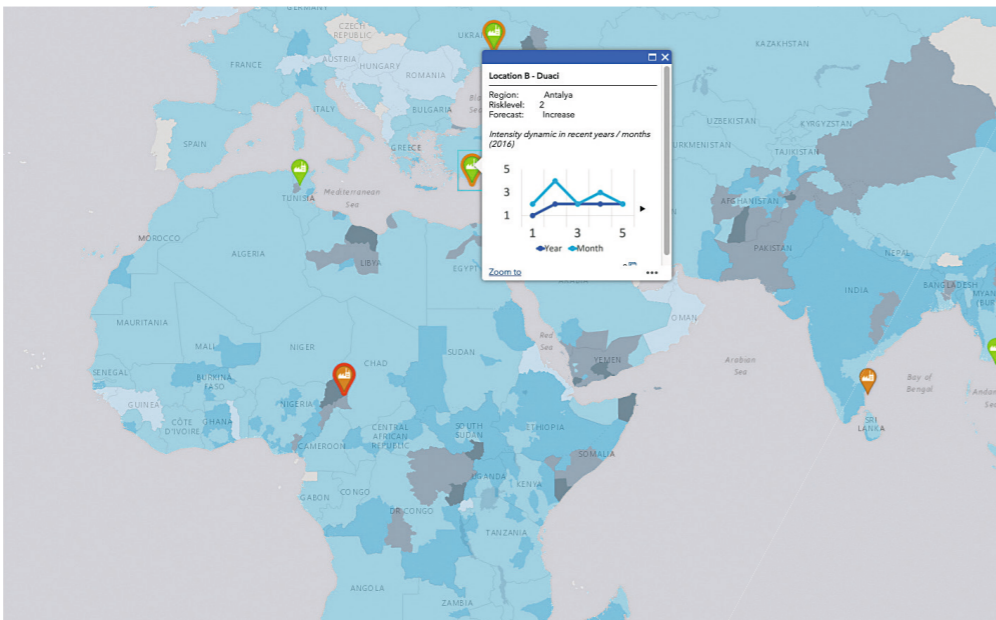

The Political Risk Solution for your Supply Chain Management

Digital Political Risk Solution: Be Informed

The CONIAS Conflict-Risk Plug-in offers a comprehensive assessment of the security situation on a sub-national level.

Due to the provision of three distinct partial indicators, a structural, current and future risk, the module can be used both as a monitoring instrument and for strategic decision making.

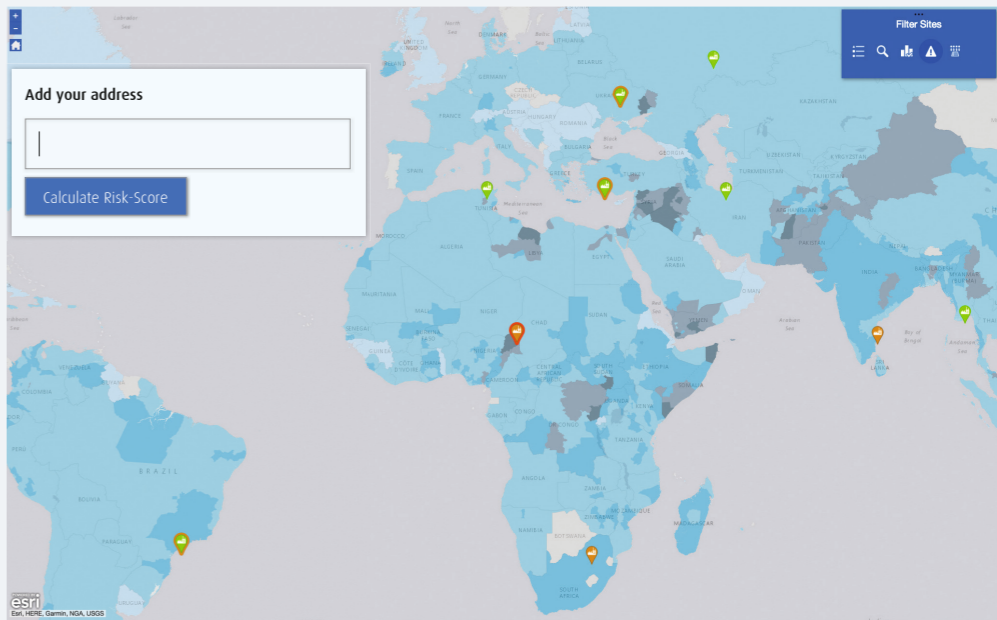

Customizable Index Approach: Be Flexible

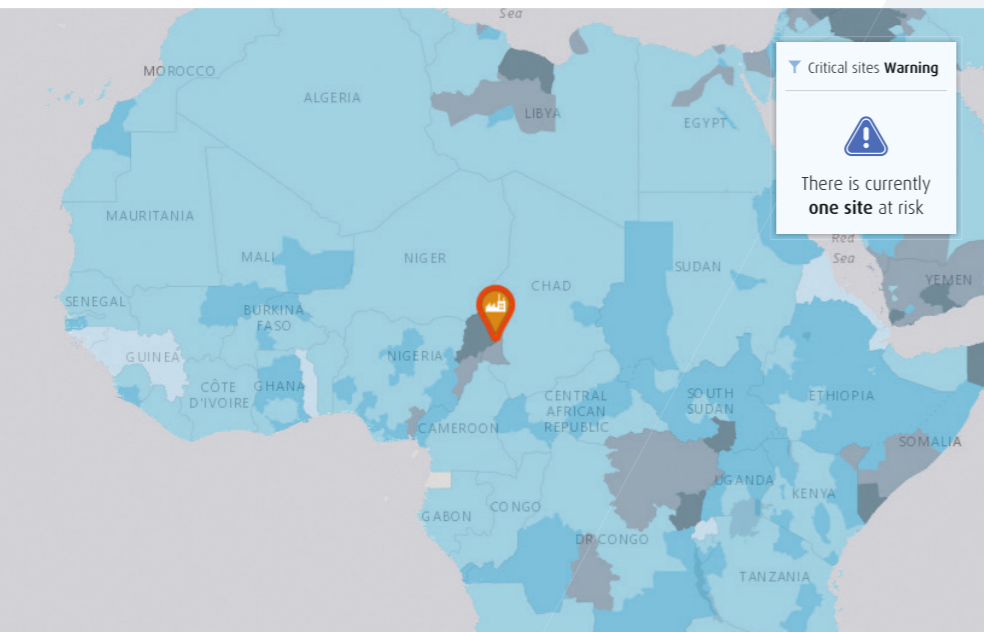

Add an address and calculate your individual political risk profile.

Our scientifically approved quantitative methodology allows for an unbiased and transparent comparison of sites worldwide.

Each assessment is based on reliable public sources and not on rumors or single opinions.

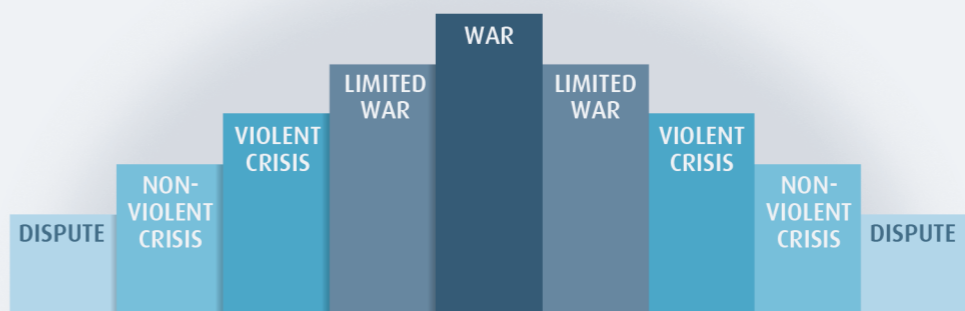

Warning Function: Be Prepared

Political risks pose an ever increasing threat to the scheduled supply of goods, spare parts or raw materials. A focused management of these risks improves the reliability of the supply chain and therefore the operative efficiency of your company in a sustainable way.

Our plug-in warns you if a site or supplier is likely to be affected by a worsening security situation in the upcoming months.

Scientific Standards: Be on the Safe Side

CONIAS Risk Intelligence is a spin-off from the University of Heidelberg, where for the last 20 years frequencies and dynamics of political conflicts have been systematically gathered in a database and analyzed.

This is the foundation of our unique quantitative methodological approach, which allows for the integration and geo-referenced localization of different types of inner- and intra-state conflicts into one single dataset.
